

Final Reflection

I really appreciate that I can take this course in this semester because it is of great benefit to me. This course makes me ~~to~~ think about some issue that I have never thought ~~so~~ deeply before and makes me think critically. Besides, I seldom expressed my thoughts with others in the past, during this course, I am more courageous to express my thoughts and listen to the different thoughts of others. Also, this class has improved my English, whether in speaking or writing. To be honest, I once wanted to give up this course because I am preparing for the test for graduate school, and there are a lot of homework in this course that make me exhausted. However, I am glad that I persevere until the end because it is really useful to me.

In terms of our presentation, the reason for choosing this topic is that we think breath detection is a very efficient way to detect diseases and we want to introduce this novel medical method to everyone. There are many advantages of breath detection such as painless, easy, immediate and cheap. However, breath detection has not been widely used in medical treatment because there are some difficulties need to overcome. Our breath will be affected by the environment, age, gender and more so that the breath detector should be very sophisticated and the technology must be mature enough to make the detection results more accuracy. However, many scientists are already conducting large-scale clinical trials nowadays, if successful, we can detect disease without using more invasive diagnostic tools in the next few years.

Especially during the epidemic, we ~~are~~ always ~~be~~ asked to submit the report within three days, it is more necessary to use breath detection to detect COVID-19 because the result can be available within a minute. Besides, the common way to detect COVID-19 now is using a tool and going into our nose, and this way made many people uncomfortable; however, breath detection is painless. This technology does bring more convenience to people.

Nice job!!! I'm glad you continued in the class too! Good luck in preparing for graduate school. Hopefully I will see you again.
